PRINCESS Sally™

HISTORY: Sally spent her early years primarily in the care of her governess Rosie and tutor Julayla as her father King Maximillian spent the majority of his time prosecuting the counter-attack against the Overlanders. When she was but five years of age, having witnessed her father vanquish several enemies to the throne, she would later discover that he met with treachery from his own Warlord, forcing Julayla and Rosie to take their young charge and seek sanctuary in Knothole Village.

During the next several years, Julayla and Rosie taught Sally a good many things about being a princess, and more importantly, about being a just and kind person. By the time she turned thirteen, Sally was more than prepared to lead her fellow Mobians into combat against the despot Robotnik.

More than a year later, Sally would suffer the loss of her beloved Julayla. Her one comfort was the knowledge that she had exceeded her tutor's expectations. It was around this time that she acquired Nicole, who looked pretty much like a hand-held calculator but possessed a consciousness equal to any organic living being.

During the past couple of years, Sally has experienced much – the recovery of her father, her apparent death, the victory over Robotnik, the knowledge of her betrothal to Antoine, the reappearance of her brother, the break-up of her friendship with the echidna Knuckles, the return of her mother – leaving her to wonder what fate has yet in store for her.

HISTORY: Originally located on the continent known as Downunda, this massive piece of real estate was separated from its planetary moorings when the echidnas — a highly technological society who built and settled the city of Echidnaopolis — discovered a comet on a trajectory that would lead it straight to the city itself. They hatched a plan that would utilize the natural resource of the Chaos Emeralds to literally launch a section of the continent into the skies and out of harm's way.

With the passage of time, a group of young scientists, represented by citizens Edmund and Dimitri, expressed their desire to restore the Floating Island to its original location on the planet. Met with hostility by the governing council, their appeal was denied, forcing Dimitri to take matters into his own hands. His plans were thwarted by his brother Edmund, who took sides with the government in maintaining the status quo.

Ever since, for well over half a millennia, the Floating Island has remained a constant in the skies, still powered by the energy of a single large Chaos Emerald. Only recently has the war upon the surface of Mobius threatened its existence. The despot Dr. Ivo Robotnik planned and schemed to steal the emerald and utilize it for his own ends, just to be defeated by the Guardian Knuckles and his sometime ally Sonic the Hedgehog.
